Hiring Manager
Deco Automotive
Rexdale, ON

Dear Hiring Manager,

I am writing to express my interest in the Manufacturing Engineer (Product Launch) position at Deco Automotive. Currently, I am pursuing my Bachelor of Engineering in Mechanical Engineering Honours program at the Lassonde School of Engineering, York University, where I maintain a grade point average of 7.7/9.0. What attracts me to Deco Automotive is the company's focus on manufacturing structural automotive components for OEMs and its commitment to continuous improvement through cycle time reduction, scrap reduction, and process optimization in a fast-paced production environment. Living in Vaughan, I am well-positioned to work at Deco Automotive's Rexdale and Brampton facilities. My background covers mechanical design, sensor-based systems, and hands-on production experience, all of which align with the responsibilities outlined in this posting.

The professional experience I gained as a Student Production Assistant at Hi-Tech EDM Inc. involved being completely immersed in an industrial setting. As a production assistant, I scheduled production activities to meet the deadlines set by customers, configured machine fixtures and loaded programs for efficient production runs, and carried out part inspections after completion, ensuring that they met engineering drawing specifications. This experience gave me practical insight into production workflows, technical documentation, and quality control — core competencies in Deco Automotive's manufacturing process. Academically, my engineering design project on the Adaptive Desk Lamp involved applying a decision matrix to optimize the performance and usability of the system, developing the analytical and design thinking skills this role demands. I have also studied Engineering Mechanics, Applied Multivariate and Vector Calculus, and Differential Equations at York University, strengthening my technical foundation. I am aware that the position requires proficiency in AutoCAD and MIG welding, and although I am still developing these skills, I am a fast learner eager to build them through hands-on experience at Deco Automotive.

I am currently a second-year student and expect to graduate by January 2029. Nonetheless, my direct manufacturing experience at Hi-Tech EDM, strong academic record, and ability to work effectively within teams make me a motivated candidate who is ready to contribute to Deco Automotive's product launch and continuous improvement goals from day one. I would welcome the opportunity to discuss how my background aligns with your team's needs. Thank you for taking the time to review my application, and I look forward to hearing from you.

Sincerely,

Avinsadat Moosavimasouleh

Mechanical Engineering Student, York University
